

Problem Statement:

- Include all the issue that is driving this project.
- If it is aging issue, state a background of the facility and methodology used to identify the aging facility
- If the violation is thermal/voltage, state the magnitude of the violation

Proposed Solution:

- State the solution that is proposed
- Include the new capacity of the proposed project (example – line rating, type of conductor ...)

Alternatives:

- List all the alternative solutions considered and the associated costs

Estimated Project Cost:

- Proposed project cost estimate

Projected IS Date:

- Expected/projected in-service date of the proposed project

Project Status:

- State the status of the proposed project.
