Interest on any True-up shall be based on the interest rate equal to the interest rate determined by 18 C.F.R. § 35.19a and published on the FERC website. Interest rates will be used to calculate the time value of money for the period that the True-up exists. The interest rate to be applied to the True-up will be determined using the average rate for the twenty (20) months preceding September 1 of the current year. Interest on refunds and surcharges shall be compounded on a quarterly basis.

The ATRR is used to compare against the billed revenue in the true-up calculation. This calculation excludes prior year true-up amounts.

The goal is to determine the value to input in Col. (D), Line 28 such that the value in in Col. (D), line 41 becomes zero. For example, using Excel's Goal Seek function, the goal would be to set Excel cell G64 to 0 by changing only Excel cell G48.

For schedule M items not directly taken to the P&L, the result of this remeasurement is a change to the net deferred tax assets/faibilities recorded in accounts 190, 282, and 283 with a corresponding change in regulatory assets (account 182.3) and regulatory liabilities (account 254) to reflect the return of/collection from excess/deficient deferred taxes to/from customers. The remeasurement is effectuated within PowerTax and Tax Provision, which maintain both the timing difference and APB11 deferred tax balance (the historical ADIT to regulatory assets/faibilities for deficient/excess ADIT. Within the FERC Form 1, deficient and excess ADIT is not count 182.3 and Account 152, and excess ADIT is not count 182.3 and excess AD
